Problem Definition -

In modern times, Education is on an ever-expanding scale, which is why for many educations doesn't stop at graduation they tend to go for further studies i.e., Post Graduation. In order to get admission in foreign universities for post-graduation, students need to appear for competitive examinations such as GRE (Graduate Record Examinations) The results of these competitive examinations play a crucial role for getting admission in such universities, which is why students need help in order to get prepared for the exam and figure out which university is the best for them according to their results. Nowadays, students find it difficult to find sample papers or mock exams online. Also, after solving these sample papers or mock tests students find it difficult to figure out their weak subjects and strong subjects and prepare accordingly. It is also difficult for students to figure out the best university which they can get an admission in according to their scores. Our application will provide user with a sample mock test based on GRE and they will get their score and they can figure out their weak subjects according to the result graphs which will be made by plotly library, If the user has already appeared for the examination, they can also input their results to show their chances of admission in foreign universities.

Introduction –

As education is on an ever-growing scale today, hence many people opt to pursue postgraduate degrees or continue their study after graduating. Many graduate programs in the United States, Canada, and a few other nations require applicants to take the Graduate Record Examinations (GRE), a standardized test. The Educational Testing Service owns and manages the GRE (ETS). The Carnegie Foundation for the Advancement of Teaching created the exam in 1936. The GRE, according to ETS, attempts to evaluate students' long acquired abilities in verbal reasoning, numeric reasoning, analytical writing, and critical thinking.

Specific algebra, geometry, arithmetic, and language components make up the GRE's content. The GRE General Test is available as a computer-based test that is given at testing locations and establishments that are owned or accredited by Prometric. The weight given to GRE scores throughout the graduate school admissions process varies greatly between institutions and between departments within institutions. A GRE score's significance can range from being only a requirement for admission to being a crucial selection criteria. There are three key sections of the test. Verbal reasoning, quantitative reasoning, and analytical writing.

For the Verbal Reasoning and Quantitative Reasoning measures of the GRE General Test, the reported scores are based on the number of correct responses to all the questions included in the operational sections of the measure.

The Verbal Reasoning and Quantitative Reasoning measures are section-level adaptive. This means the computer selects the second operational section of a measure based on your performance on the first section. Within each section, all questions contribute equally to the final score. For each of the two measures, a raw score is computed. The raw score is the number of questions you answered correctly. The raw score is converted to a scaled score through a process known as equating. The equating process accounts for minor variations in difficulty among the different test editions as well as the differences in difficulty introduced by the section-level adaptation. Thus, a given scaled score for a particular measure reflects the same level of performance regardless of which second section was selected and when the test was taken.

GRE-AT is developed for users preparing for GRE examinations and also for users who have already appeared and received their results and are trying to figure out which university is suitable for them. This website is basically a all-in-one destination for students who want to pursue post-graduation.

Description –

The website will be called "**GRE At**" and will be designed to help users practice for the GRE exam and get a better understanding of their strengths and weaknesses. Here is a detailed description of the website's features:

Home page: The home page will have a brief introduction to the website, with a call-to-action button for users to register/sign-up for a free account.

User registration/sign-up: Users will need to register on the website using their email address and a password. Once registered, they will be able to access the mock tests and other features of the website.

Mock tests: The website will offer a set of mock tests based on the GRE format, including Verbal Reasoning, Quantitative Reasoning, and Analytical Writing. Each mock test will consist of a set of questions with a time limit, similar to the actual GRE exam. Users can take these tests multiple times to practice and improve their scores.

Score analysis: After completing a mock test, users will be able to see their scores and a detailed analysis of their performance. The analysis will be presented using graphs and charts created using the Polly library. This will help users identify their strengths and weaknesses and focus their preparation accordingly.

Personalized study plans: Based on their mock test scores and performance analysis, users will be provided with personalized study plans to help them improve their weak areas.

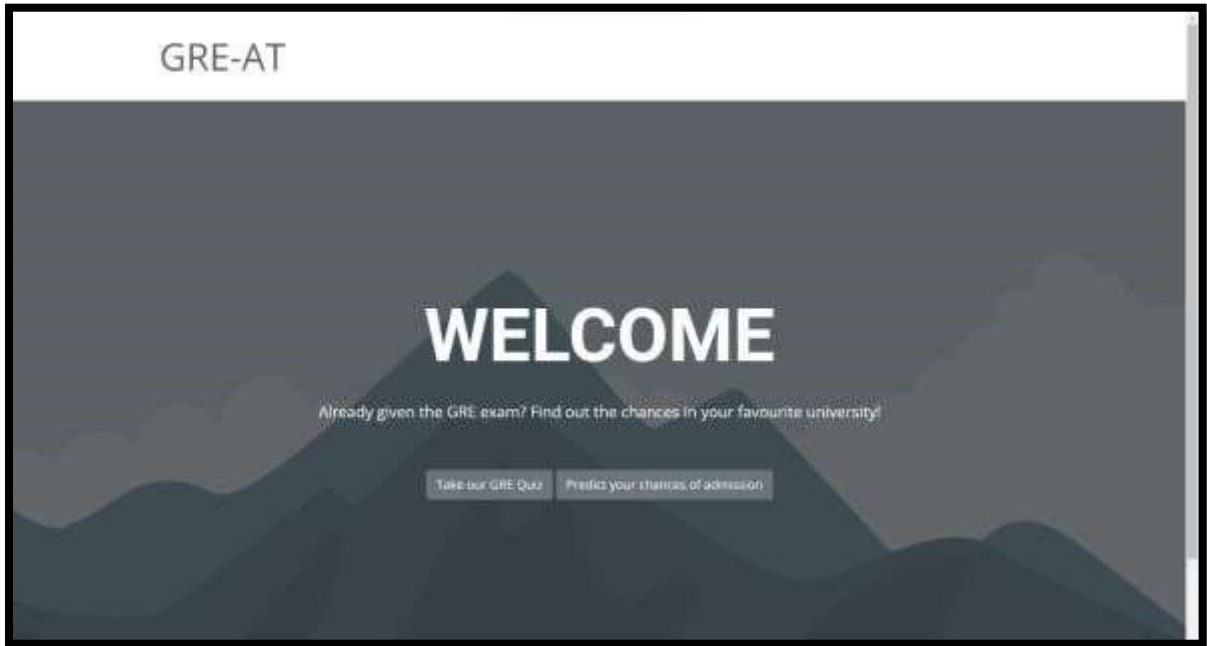

University admission predictor: If the user has already appeared for the GRE exam, they can input their scores and other details to get an idea of their chances of admission in foreign universities. The website will provide a list of universities based on the user's profile, along with their admission criteria and other relevant details.

Resources: The website will provide a list of resources such as recommended books, study materials, and online courses to help users prepare for the GRE exam.

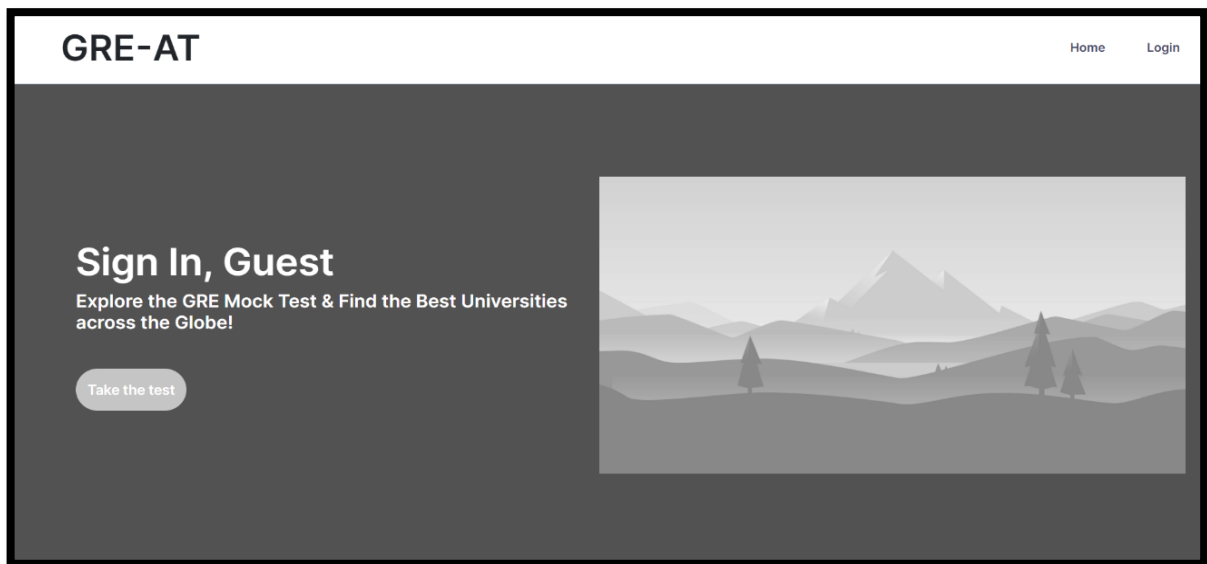

Discussion forum: The website will also have a discussion forum where users can interact with each other, ask questions, and share their experiences and tips for preparing for the GRE exam.

Frequently asked Questions

What does this web application do?

We basically have a dataset with the following parameters like GRE score, TOEFL score etc and gives the output that is chance of admit in the range of 0 to 1. This dataset is then trained using our ML model which is currently using linear regression to predict the target column(Chance of Admit) and provide you with an idea about the chances in your favourite uni!

What are SOP and LOR scores?

Statement of purpose(SOP) and letter of recommendation(LOR) are rated out of 5 by some universities 1 being the lowest and 5 being the highest
